

Logical and Physical Database Design

Claire Trebing, Jason Young, Illya Starikov

Due Date: March 18, 2016

1 Revised Problem Statement

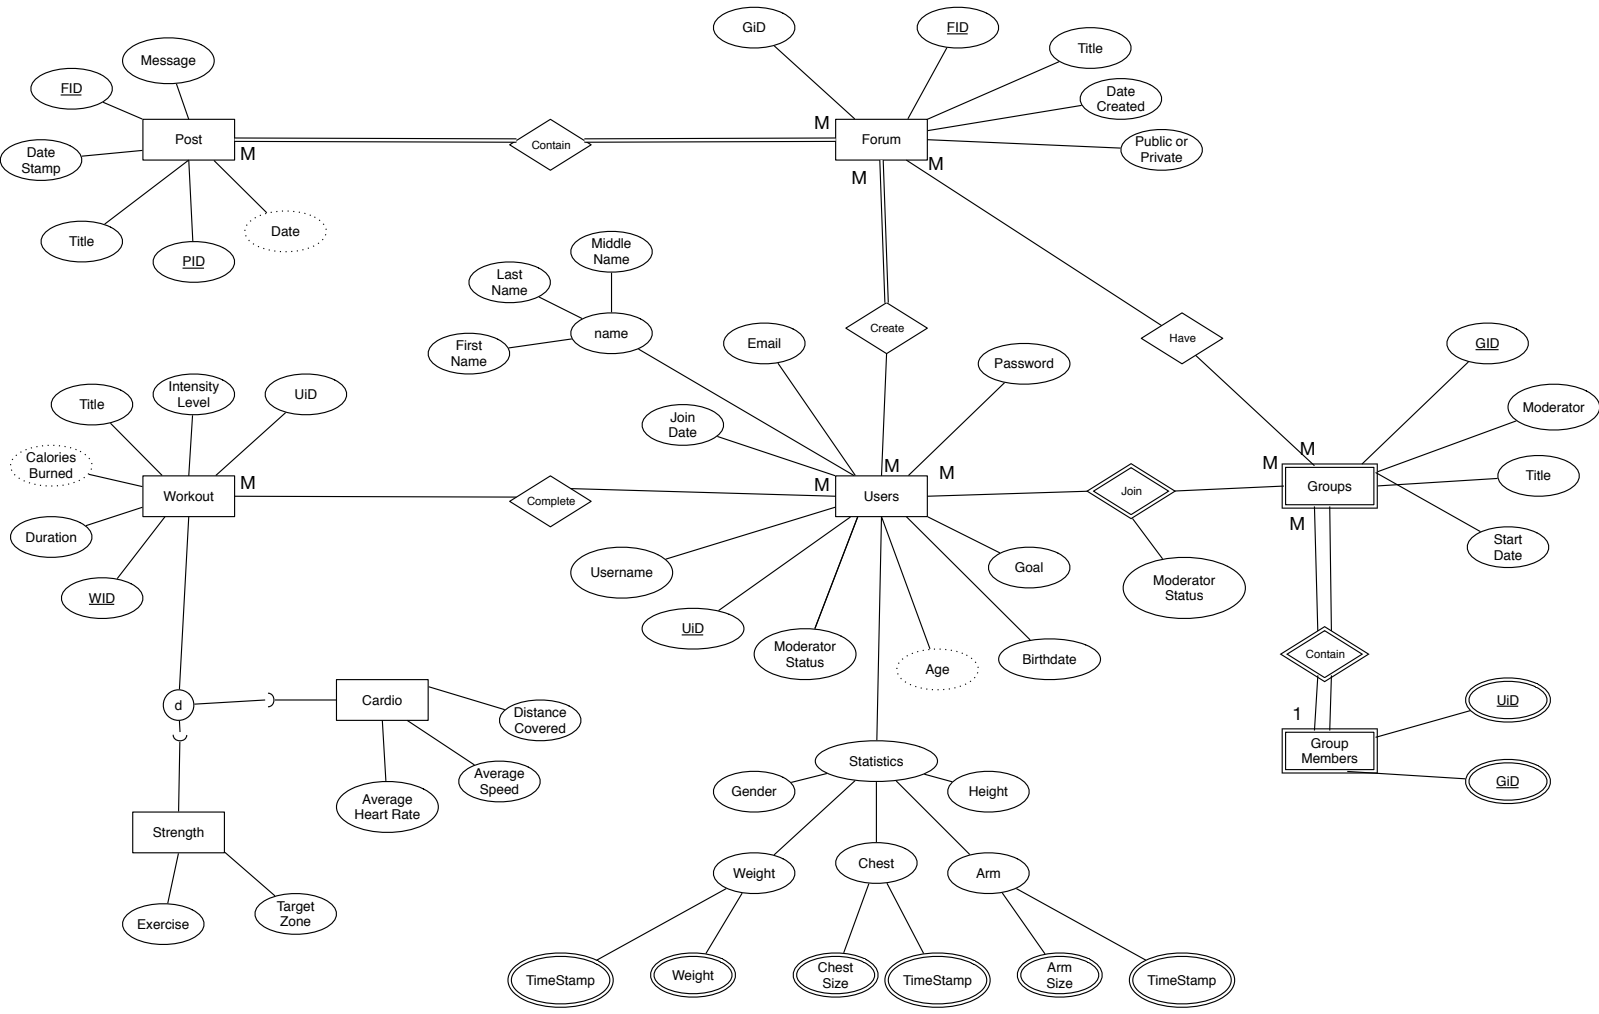

2015 marked a record year for Americans regularly exercising, hitting just over 55%. Keeping that momentum is difficult. As blue-collar jobs continue to decline, it has been more important than ever to keep a weekly regimen of healthy eating and exercising.

Living in the most interconnected generation poses quite a viable idea for social networking: healthy living. We can build a social network that connects users to friends, peers and family to make an online community of healthy living.

Our database will be essential because it will unite something so mundane and uninteresting with familiar faces. This will make exercise more enjoyable and offer a group to hold you accountable. We can shape an entire generation by having motivation a click away.

This database will consist of premade workouts, groups, and reminder emails to help you stay on top of your fitness plan.

2 Revised Conceptual Database Design

3 Logical Database Design

3.1 Relational Set

Please note primary keys are signified by **PK** and foreign keys are signified by *FK*.

Post

| | | | | | |
|----------------------|----------------------|---------|-----------|-------|------|
| <u>PiD</u> PK | <u>FiD</u> <i>FK</i> | Message | DateStamp | Title | Date |
|----------------------|----------------------|---------|-----------|-------|------|

Forum

| | | | | |
|----------------------|-------|-------------|-----------------|---------------|
| <u>FiD</u> PK | Title | DateCreated | PublicOrPrivate | GiD <i>FK</i> |
|----------------------|-------|-------------|-----------------|---------------|

Groups

| | | | |
|----------------------|---------------------|-------|-----------|
| <u>GiD</u> PK | Moderator <i>FK</i> | Title | StartDate |
|----------------------|---------------------|-------|-----------|

Workouts

| | | | | | |
|----------------------|----------|-------|----------------|----------------|---------------|
| <u>WiD</u> PK | Duration | Title | IntensityLevel | CaloriesBurned | UiD <i>FK</i> |
|----------------------|----------|-------|----------------|----------------|---------------|

Strength

| | | | | | | | |
|----------------------|----------|-------|----------------|----------------|---------------|----------|-------------|
| <u>WiD</u> PK | Duration | Title | IntensityLevel | CaloriesBurned | UiD <i>FK</i> | Exercise | Target Zone |
|----------------------|----------|-------|----------------|----------------|---------------|----------|-------------|

Cardio

| | | | | | | |
|----------------------|-----------------|-------|----------------|----------------|---------------|------------------|
| <u>WiD</u> PK | Duration | Title | IntensityLevel | CaloriesBurned | UiD <i>FK</i> | AverageHeartRate |
| AverageSpeed | DistanceCovered | | | | | |

Users

| | | | | | | | |
|----------------------|------------|----------|-----------|------|----------|----------|--------|
| <u>UiD</u> PK | Username | Height | Birthdate | Goal | Password | JoinDate | Gender |
| FirstName | MiddleName | LastName | | | | | |

Weight

Arm Size

| | | | | | |
|--------------------------|----------------------------|--------|--------------------------|----------------------------|----------|
| <u>UiD</u> <i>PK, FK</i> | <u>TimeStamp</u> PK | Weight | <u>UiD</u> <i>PK, FK</i> | <u>TimeStamp</u> PK | Arm Size |
|--------------------------|----------------------------|--------|--------------------------|----------------------------|----------|

Chest Size

| | | |
|--------------------------|----------------------------|-----------|
| <u>UiD</u> <i>PK, FK</i> | <u>TimeStamp</u> PK | ChestSize |
|--------------------------|----------------------------|-----------|

Group Members

| | | |
|----------------------|----------------------|-----------------|
| <u>UiD</u> PK | <u>GiD</u> <i>FK</i> | ModeratorStatus |
|----------------------|----------------------|-----------------|

3.2 Summary Table

| Attribute | Data Type | Constraints | Meaning |
|------------------|-----------|-----------------------|---|
| Message | varchar | 500 characters | Contents of a post. |
| FID | int | unique | Forum ID. |
| DateStamp | timestamp | timestamp of creation | Timestamp of post was creation. |
| Title | char | 35 characters | Title of a post. |
| PID | int | unique | Post ID. |
| Date | timestamp | date of creation | Timestamp of post creation. |
| Title | char | 35 characters | Title of a forum. |
| DateCreated | timestamp | timestamp of creation | Timestamp of forum creation. |
| PublicOrPrivate | boolean | - | Is forum public. |
| GID | int | unique | Group ID. |
| Moderator | char | must match a username | Group owner/moderator. |
| Title | char | 35 characters | Title of the group. |
| StartDate | timestamp | timestamp of creation | Timestamp of group creation. |
| IntensityLevel | int | - | Enumerated value, code for different options. |
| Title | char | 35 characters | Title of the workout. |
| CaloriesBurned | int | num > 0 | How many calories burned during exercise. |
| Duration | timestamp | num > 0 | Length of exercise. |
| WID | int | unique | Workout ID. |
| Exercise | char | 35 characters | Exercise name. |
| TargetZone | char | 35 characters | Area exercise is intended to workout. |
| AverageHeartRate | int | num > 0 | Average heart rate recorded during exercise. |
| AverageSpeed | int | num > 0 | Average speed of cardio exercise. |
| DistanceCovered | int | num > 0 | Distance covered during cardio exercise. |
| Password | char | - | Password of user. |
| JoinDate | timestamp | timestamp of creation | Timestamp of users sign up. |
| Username | char | unique | Users username, used for sign in. |
| ModeratorStatus | boolean | - | Is a moderator. |
| Birthdate | date | - | Date of users birth. |
| Goal | varchar | 500 characters | Users intended workout goals. |
| Gender | char | 1 character, M or F | Users gender, male(M) or female(F). |
| Weight | int | num > 0 | Users weight at a certain date. |
| ChestSize | int | num > 0 | Users chest size at a certain date. |
| ArmSize | int | num > 0 | Users arm size at a certain date. |
| Height | int | num > 0 | Users height at a certain date. |
| UID | int | unique | Users ID. |
| TimeStamp | date | unique | Date of users weight measurement. |
| TimeStamp | date | unique | Date of users chest measurement. |
| TimeStamp | date | unique | Date of users arm measurement |

4 Application Program Design

Create a New User

This function creates a new user, accessing only the **user** table.

| | |
|-------------|---|
| INPUT | Username, Height, Birthdate, Goal, Password, Gender. |
| STEPS | <ol style="list-style-type: none">1. Check to see if the username is available. If available, proceed. If not, display appropriate message to notify the user.2. Insert appropriate information to the User table. (Username to username, height to height)3. Generate a user ID, assign it to the UiD attribute.4. Take a time stamp, assign it to the JoinDate attribute.5. Calculate the age based on the BirthDate attribute. |
| OUTPUT | A new User entity will be inserted into the table, with appropriate data into proper columns (along with computed properties and derived properties). |
| ASSUMPTIONS | Username, Height, Birthdate, Goal, Password, Gender are all correct (this will be validated in the sign up form). |

Delete A Group

This function deletes a group by updating information in **Forum**, and removing the **Group** and **Group Members** tables.

| | |
|-------------|---|
| INPUT | The Group ID (GiD) that is to be deleted. |
| STEPS | <ol style="list-style-type: none"> 1. Check to see if the request is made by the moderator via the Moderator column in the Groups table. If true, approve the request. If not, cancel the request and notify the user. 2. Remove the row that has a matching GiD that was provided for deletion in the Groups table. 3. Query the Group Members table, removing any row that match the GiD provided for deletion. 4. Query the Forum table for any matching Group Ids (GiD), setting the GiD to null if matching. |
| OUTPUT | The groups are deleted, the group members within that group are deleted, and any reference to the group is deallocated. |
| ASSUMPTIONS | None. |

Modifying User Statistics

Our user statistics have the ability to fluctuate. We would like to accommodate for this fluctuation by allowing users to update their respective statics; specifically, we would like to let users update **Username**, **Height**, **Goal**, **Password**, **Gender** in the **Users** table.

| | |
|-------------|---|
| INPUT | The specific attribute(s) of the set Username , Height , Goal , Password , Gender that would like to be updated with the new value. |
| STEPS | <ol style="list-style-type: none"> 1. Ensure the data is valid (e.g. is not null when applicable, in the proper domain). If it is valid, continue. If not, prompt the user with an error message and try again. 2. Modify the attribute to reflect the new value. 3. Repeat for any additional attributes provided. |
| OUTPUT | The attribute(s) should now reflect the new value provided. |
| ASSUMPTIONS | The data is within a proper range (will not overflow). |

Query Other Users

This function allows for users to query other users; this can be done via **Username** or **FirstName**, **MiddleName**, and **LastName** from the **Users** table.

| | |
|-------------|--|
| INPUT | Either a Username xor any subset of FirstName , MiddleName , or LastName . |
| STEPS | <ol style="list-style-type: none">1. Check to see if input is valid. If is, proceed. If not, display error message to the user.2. Query the Users table to see if the user exists. If the user exists, proceed. If not, display appropriate message to the user.3. Project the profile. |
| OUTPUT | Either the search user will be projected or an error message is the user does not exist. |
| ASSUMPTIONS | The first, middle and last name are all provided. The names are unique (solely for the testing purposes). |

User Leaderboards

Generate the leaderboard based on the workouts accomplished; specifically aggregating data from the **Strength** and **Cardio** table. *Note this is the function that requires multiple tables.*

| | |
|-------------|---|
| INPUT | None. |
| STEPS | <ol style="list-style-type: none"> 1. Merge the User and Workouts table, call the new table Merged. 2. Add up the total duration (call the new property TotalDuration) in the Merged table based on the UiD attribute, making a new table named Sums. 3. Sort the Sums by the TotalDuration attribute. 4. Display the top 10 on the sorted Sums table to the user. 5. Display the user their current rank. |
| OUTPUT | An eleven-row table displaying the top 10 leaderboards and the users current rank. |
| ASSUMPTIONS | There is a bare minimum of eleven users. |

5 User Interface Design
